I have the following piece of code that parses the first line of a text file. I want to find out how to get the Index (or Position) of the first occurrence of the string _ExtractNum (note: not the underscore, but the actual numeral) in a list. Regex expr = new Regex(@"_ExtractNum[0-9]*", RegexOptions.Compiled); I have tried Regex expr = new Regex(@"_ExtractNum[0-9]*", RegexOptions.Compiled); to no avail. Edit: Explanation of the Regex: The text file looks like this: a_def b_extract _ExtractNum _ExtraExtractNum 2d92ce491b
