A: That's because checking is what the browser does when there's no viewable image, and there isn't any image for the alt attribute of in your html. The alt attribute is used for accessibility purposes, if you want to read the text, and show a screenshot in the alt description. So simply put this: And no need to use checked If you don't want to provide a description, then the image should be replaced with a white background and alt="". Image Tags - Learn Web Design - HTML5 and CSS3: The alt attribute is what people who are using screen readers and other assistive technologies read when images are not visible. Hope it helps. About Accounts You are at the newest post.[Click here to check if anything new just came in.](#) And provide advice and comfort to the patient and his or her family. Just like my son and I did for my dad when he was facing cancer. When I learned that my own father had colon cancer and was soon to be undergoing treatment at a major cancer center in New York City, I was really worried. My father was in his mid-70's at the time, and I knew he was too healthy to be having cancer. Why he was having to undergo treatment that was so aggressive? The thought of being a patient of a doctor who was going to cut into the rectum, sew up the gaping wound and then staple the edges of the wound together gave me goose bumps. I knew that this was no average, routine, "gut stuff" surgery. This was my Dad, and I didn't want him to go through it. My parents divorced when I was very young, and my mother remarried a long time later. My dad married my stepmother when I was only six. I barely remember my father before I was 16, and my childhood memories of him are very sketchy at best. But I was sure I knew what my dad was like, and I knew the person he was to me and my stepmother. To know that he was about to have what my mother had always called "the big C" was just awful to think about. By the time I found out that 2d92ce491b
