A Design Process How it works: During the design process, a drawing may consist of any number of objects. Each object is composed of features that you create. You define features by specifying point and line coordinates. You also define the size, shape, and other attributes of each object. For example, you may draw a profile consisting of a series of lines, and then define it as a shape. You may then create features by entering point and line coordinates, which are described as "point" and "line" in the following sections. You may then assign attributes such as color, linetype, line pattern, line weight, dash type, and dash style. When you create a feature, it automatically appears on the drawing, and an entry appears in a table of attributes. You may also customize the attributes of each feature individually. An example of an attribute table for a line and its attributes: Feature Category: Line Attribute Table: Horizontal Line Style: Horizontal Stroke Offset: Horizontal Width: Horizontal Line Weight: Type: Line Color: Shadow Color: Shadow Transparency: Shadow Offset: Label Type: Label Position: Label Color: Label Horizontal Alignment: Label Vertical Alignment: Label Size: Edge Color: Selected Color: Marker Color: Marker Type: Fill Type: Line Pattern: Line Type: Line Style: Line Size: Leader Type: Leader Size: Leader Color: Text: Font: Undo Back Type: Undo Back Text: Undo Back Color: Undo Back Number: Undo Back Length: Undo Back Angle: Undo Back Border: Undo Back Percentage: Undo Back Shape: Undo Back Attribute: Text Feature: Text Alignment: Text Vertical Offset: Text Horizontal Offset: Text Size: Text Color: Text Border: Text Fill Type: Text Attribute: Text Edge: Text Angle: Text Symbol: Text Shape:

Create and send 3D drawings for free as you work. Send your 3D models to 3dsMax or SolidWorks without the need for AutoCAD. (video: 1:20 min.) Autocad in your browser: You can now open, print, annotate, and comment on AutoCAD drawings while you browse the web. Custom Menu Enhancements: The Custom Menu enables you to quickly navigate around your drawing, and customize the behavior of the toolbars and menus. Choose your favorite view, or disable views that you never use. A New Animation Engine: Drawing and animation together. Use drawing tools to create interactive elements in your drawings. For example, when you add a parametric text or break, you can animate it by moving it in space or by sweeping it back and forth. (video: 1:24 min.) When you use a 3D model, you can rotate and animate it to see the model from different angles. Unique Set Up Operations: A new set-up tool enables you to create multiple components of a complex structure, then use the set-up tool to draw out the set-up in just one operation. With the new Multi-Selection tool, you can select multiple objects, and then move, rotate, or scale them in just a few clicks. Proportional Editing: Use the proportional editing tool to edit the length of lines, arcs, splines, and more, all without changing their angles. Drawing Tips and Improvements: The Drawing Tips feature shows quick tips about how to perform common tasks, and how to see common editing mistakes. The Dynamic Input method for the move, rotate, and scale tools lets you do all the commands with just one movement of your mouse. Tools and Features The tools in AutoCAD 2023 are updated with many exciting new features, and improvements to existing tools. Snap Mode: You can now take advantage of Snap mode to annotate a free-form model. Simply select your tool, and it will snap to your model while you draw. All tools now have a menu with a pick button. All drawing tools have a new tool context dialog box. You can now save as a Raster image in addition to saving as a Vector file. The AutoRecorder can now record and play up to 30% faster
