Visual LISP Visual LISP is a proprietary scripting language for the creation of new functionality and customization of AutoCAD. It is proprietary to Autodesk. Visual LISP is somewhat similar to LISP, the more general scripting language. Visual LISP is not a standard LISP dialect; instead, Visual LISP is based on Visual Basic, and can therefore be compiled and run on any Windows-compatible machine. Visual LISP supports many common programming concepts, such as objects, variables, functions, and classes. Visual LISP uses the "Visual Basic Compiler" to convert Visual LISP into the native compiled code of Visual Basic, which is then interpreted and executed by AutoCAD.

Visual LISP scripts can be run from the scripting editor or from any application (AutoCAD, etc.) that can import and/or run Visual LISP code. Visual LISP is used to automate and control the software, create macros, scripts, and applications. Visual LISP is used to: Control AutoCAD using Visual LISP and to create custom functions and scripts Create macros and applications, which are stored in Visual LISP scripts Integrate AutoCAD with other products such as PowerBuilder and Visual FoxPro and do programming and automation tasks with those Build new drawing features, add new functions, and do programming and automation tasks with Autodesk products. Visual LISP is also used for the creation of new draw text items (document labels, fields, etc.), which are stored in.LIS files. Visual LISP's status as a proprietary language has been a source of controversy and controversy. Some users have questioned whether it is a legitimate substitute for Visual Basic or LISP, and more specifically whether it is on par with Visual Basic or LISP. Visual LISP has its strengths and weaknesses; as of version 2010, Visual LISP's largest weakness is its difficulty with large blocks of code and its slow execution. ObjectARX ObjectARX is an object-oriented extension to Visual LISP

for AutoCAD. It was the base for Autodesk's Power ARX. ObjectARX supports: Creating Visual LISP classes
Create/store data (variables) of any type, including both LISP data types and AutoCAD data types Automate data entry

If the key file is not located on the same server where you have installed Autocad, you have to replace with the server IP or DNS name of Autocad. This command would replace the local license key in with the key file in the given and fields. [If you are working as a Developer in a company who have purchase this key, please ask the AutoCAD publisher to license the key to your company.] You may need to run the following command before running the above command to remove the existing license key: C:_usr_bin_adt.exe\ cd_usr_bin_adt\ keygen.exe /u: /p: /d: /f: Example SET KEY= SET KEY_FILE= SET
