PCs will be more responsive The use of HTML5 accelerates the download of the page and the rendering of the page. I have noticed that, with HTML5, the page load is faster and the page is more responsive to touch and movement. We know that HTML5 makes the site's look modern, makes the site mobile and responsive, and not break the site. Security

HTML5 is a secure technology by default, so all your data is encrypted. You do not have to worry about transmission of the data and information. The user's data is protected and his data never falls in hands of the unauthorized user. No Client Required When you surf the web you have to install and run an application. With HTML5 it is no more required. You can use all the functions of the website without installing any software. The following questions answer

the core of what we think should be the biggest feature of any web browser technology - its networking capabilities. How is HTML5.2 different from HTTP/2? HTML5.2 has been long awaited and in fact most people have been wanting it for a long time now. Some reasons for this delay are the increase of internet usage and the inevitable development of software that are not compatible with HTML5. The latest HTTP/2 specification was a very big deal. It was a

huge step in speeding up internet usage, especially in high-traffic websites. Since the specification was released last year, Internet Explorer 10 has already been introduced with HTTP/2 support. When the specification was first released, I had the option to turn on the new mode in the IE10 Developer Tools, so that my Firefox (and other) browsers would be automatically sent to this new mode. It was a great first experience. HTTP/2 makes pages much faster to

load. That's what everyone wants. In fact, if you're just browsing the web, you don't have to worry about changing anything. There is no need to change your browser to support the

Caddy is a vector based application. There are about 2000 objects in the program. These objects are divided in to 3 categories. Basic objects (fillings), Combo objects (combo fillings) and Objects with animation. Basic objects: The basic objects are drawn as line fillings in the form of rectangles, ellipses and lines. A lot of objects like 3D bar graphs and bezier curves can be created

with this objects. Combo objects: With the Combo objects you can draw, with the mouse, fillings for the basic objects and by this create objects that is full complex. Combo fillings is called ovals when you draw it from left to right and in from right to left you call it ellipses. You can draw ellipses with length and width and full complex ellipses and also 90 degree ellipses that is same as rectangles. 3D charts are made by using this objects. The

objects with animation are a series of drawings that are change in some time. A animated object can be changed every 5 seconds, or some other animation speed. Example: You can choose when a animation starts. It can be when you drop the object on the work sheet, when you press a key on your keyboard or when you start a timer. Then you draw the object. The object can be animated in a series of drawings that are change in some time. In this

example you can have the same drawing, just that the drawings is changed in some time. Example: You can see the work sheet below and when you drop the object the work sheet change and you can see the animation that I have choosen.
