What's New In?

SYSInfo Monitor is an advanced, reliable and easy to use hardware and software benchmarking tool. It will scan your system for hardware performance and energy consumption. Based on the old school hit theme of a kickboxing fight, The Falconer is a next generation application for home-use, offering a free-to-play fighting experience for your PC. All you need to do is grab a pair of weighted gloves, add a few virtual opponents to the ring, hold on and deliver a few powerful kicks to knock out your enemies. The energy of your attacks directly influences your opponents as they react based on a number of different factors including what they are wearing, their health and whether they have been damaged. You will also be able to choose to try out one of our other three fighting styles or play an easy paced, casual game. FEATURES Free-to-play fighting Virtual opponents are knocked out via a kick action Over 50 realistic locations to fight in Control multiple opponents Choose from three fighting styles Fight in Casual or Ranked modes Choose from 40 weapons Set up rankings and fight challenges Various game modes, including Endless Customise your user profile Graphics quality simulates the look and feel of a physical fight After a swift and uneventful installation, you are welcome by a modern interface similar to a dashboard for quick access. While on the left, you can preview the current users, you can learn more about the components and general software by accessing the options on the right. The utility provides detailed information about the CPU, graphic card and storage media. For instance, for the CPU, the app displays the full name, device ID, manufacturer, current clock speed, caption, number of cores and the corresponding temperatures, number of logical processors, architectures, address width and process type. The data can be copied to clipboard or saved as TXT or CSV. Allows for a basic system diagnostic The utility comes with a system diagnostic feature that targets the CPU, RAM and storage. Despite the name, the app does not highlight various problems with the aforementioned elements, but rather it shows different aspects that can help advanced users investigate a potential issue further. For example, the app displays the total, used and available RAM and based on the numbers, you may want to determine what is hogging it. Other information that you can learn about your system via this tool includes printers, motherboard, BIOS, network, audio device and the operating system. Take note that the app just provides the info and cannot help you make any modifications. A handy system information utility All in all, SYSInfo Monitor is a straightforward program that can gather and display details about your computer without too much hassle. Description: SYSInfo Monitor is an advanced, reliable and easy to use hardware and software benchmarking tool. It will scan your system for hardware performance and energy consumption. Blu-ray movies are a huge hit
